# Y1/2 – How can I sort the data?

Computers are not intelligent, they need input from humans to perform tasks. They use **labels** that we give objects to sort and arrange the information we give the computer.

Rulers	Pencils
Erasers	Paper
Pens	Scissors

Search engines like Kiddle and Google use properties to show us what we are looking for.

Kiddle
Safe visual search engine for kids

Objects are grouped by their **properties/labels** that we give them. Some of these properties could include:
Size   Colour   Shape   Same
The property of this group is **red**.
The property of this group is **animals**.
